

1. Tree House One - is the largest tree house with a facade that faces the picnic area. It is wrapped around the trunk of a large pine tree at a platform height of 2.5m. The roof is shingle and the walls are clad in uneven, waney boards with little windows to resemble a fairy tale dwelling. Inside we have added bench seats. There are four routes in, a funnel net from ground level, a scramble net from the rope challenge course, a pole bridge and steps to the highest platform.

2. Tree House Two - has the highest platform at 3m and no roof in order to gain extra height within the restriction of 4m. It is wrapped around the tree trunk but self supporting so as to not cause damage to the tree. Below the deck from the poles we have attached nets for quiet time and social interaction in the shade. From the 3m platform height we will install a bespoke stainless steel tube slide with a 90 degree turn that ends in the sunny clearing in front of the cafe seating area. There is a quick access route back up to the slide via a fixed robinia pole ladder. At 3m high this slide is bespoke and exciting, providing a unique play experience for California Country Park.

3. Tree House Three - a lower 2m platform height with a more accessible route up via some step boxes, this Tree House has a smaller roof of shingle to match Tree House One. The easy route is for adults and less able children to access the higher levels and the tube slide. A Fireman's pole, climbing wall and funnel net provide routes up and down from this tree house.
